

# BIENNIAL REPORT

OF THE

# SUPERINTENDENT

OF THE

# FLORIDA HOSPITAL FOR THE INSANE

FOR THE YEARS 1901 AND 1902.

I. B. HILSON,  
STATE PRINTER,  
TALLAHASSEE,  
1903

## **OFFICERS OF THE HOSPITAL, 1902.**

---

### **BOARD OF COMMISSIONERS OF STATE INSTITUTIONS**

---

W. S. JENNINGS,	Governor
H. CLAY CRAWFORD,	Secretary of State
A. C. CROOM,	Comptroller
J. B. WHITFIELD,	Treasurer
B. E. McLIN,	Commissioner of Agriculture
W. N. SHEATS,	Supt. of Public Inst.
W. B. LAMAR,	Attorney General

---

### **RESIDENT OFFICERS.**

V. H. GWINN, M. D.,	Superintendent
R. F. GODARD,	Physician and Asst. of Supt.

making a general increase in population of 57, and total number belonging to the Hospital at the end of this biennial term (including 25 on furlough) 697.

The percentage of recoveries based on the total number treated for 1901 was 10 per cent, and for 1902 was 11.66 per cent. The per cent. of deaths for 1901 was 13.48 per cent., and for 1902 was 11 per cent.

During the last two years there has been no serious accident, suicide or epidemic of disease among our patients.

I have endeavored to grant our patients as many outdoor privileges and as much freedom from restraint and confinement as consistent, and to make the Hospital as home-like as possible.

Tables Nos. 1 and 2 show movement of population for each year of the biennial term.

Tables Nos. 25 and 26 show amount expended each year on accounts, pay-roll, transportation, cash incidental, improvement, drugs, farm, dairy and chaplain. The amount expended in 1902 over 1901, I attribute mainly to increased price of provisions.

#### EMPLOYMENT.

It is our practice to encourage the employment of as many patients as possible at something that affords both mental and physical recreation, and also beneficial to the Institution.

We have quite a number of men that are employed on the farm in various ways.

The ladies do sewing, fancy work and embroidering with much taste and skill.

The patients all do work willingly; in fact most of them that work are anxious to do something. A few need encouragement. It is against the rules to force any patient to work.

All the ironing is done by hand by colored female patients, assisted and directed by attendants.

Practically all the washing is done by machinery, which is very satisfactory, considering the number of people to wash for and the amount of clothing soiled by a certain class of patients, involves an immense amount of work done at the laundry.

The sewing room has been managed exceedingly well.

regular laundry stoves, costing \$100, for heating irons, was bought and one placed in each ironing room.

The basement under the east end of the colored male building has been converted into a dining room 70 by 30 feet. This was done to increase the capacity of the colored male department, by changing the old dining room into sleeping rooms.

Eight new porcelain lined bath tubs of modern design have been added to the wards, at a cost of \$240.00, to increase bathing facilities.

We were forced to put in a new armature in our dynamo at a cost of \$211.50. The old armature was repaired and is kept on hand for an emergency. As we have only one dynamo this is important. The change can be made in one day, and the armature is the only thing liable to a break down of the dynamo.

The entire inside of the Administration building has been painted, new stairway built, rooms carpeted and furnished, mostly with new furniture.

The old sewing room and dry goods store room has been fitted up into offices and drug room. The rooms formerly occupied for drug room and physicians' office in white female convalescent building has been furnished for reception room for patients.

The old range in the main kitchen gave completely out and was replaced by a new one, and a new chimney built at a cost of \$280.00.

About fifty live oaks have been set out for shade trees, also 100 peach trees for fruit.

We are endeavoring to establish a poultry yard well stocked with a good breed of chickens.

The toilet rooms in the white convalescent male department were condemned and replaced by a new automatic siphon induction range closet. Both of these toilets are on the veranda, yet are practically on inside of wards, as a door has been made leading directly from the wards to the toilet rooms. These toilet rooms are accessible at night to the patients, thus doing away with about 150 commodes, besides considerable odor and unsanitary conditions. The cost of these closets, eight in number, was \$360.00. We are now at work placing new closets throughout the female department with "Madden's Patent Automatic Flush" closets. When completed we expect to have them used by the patients even at nights,

and do away with the promiscuous use of commodes. I would respectfully recommend that this system be adopted throughout the Institution as early as practicable.

#### FARM.

During the past two years the farm has been cultivated as usual, and the crops afford considerable revenue to the Hospital. This year's crops were not good, having been cut short by the severe drought. Last year's crop was better, and made a fair yield where it was well fertilized. Corn has been short on account of the poor land and no fertilizer used. We are planting the velvet bean for the cows, and it has proven a valuable forage crop as well as a good milk producer.

We have added to the farm for cultivation about 40 acres of valuable land. The cost of getting this land ready for the plow has been practically nothing, as the farmer has done this with his regular force of hands and patients.

All the wood on the land was cut into fire wood. We have kept accurate accounts of all the farm expense, and credited when extra hauling was done for the Hospital. The hauling of wood and provisions for the Hospital is a considerable item, and keeps from three to four teams constantly busy.

Tables Nos. 23 and 24 you will see complete list of products, etc., of the farm, and farm expenses.

#### DAIRY.

We have in the dairy department 30 head of milk cows, 22 head of young cattle and one Jersey bull. We have selected the best of the milk cows, and those that were considered unprofitable for dairy purposes were butchered for beef.

We have kept an accurate account of receipts and expenditures of the dairy department, which you will find in Tables Nos. 21 and 22. We are gradually adding to our number of dairy cows and replacing those condemned by raising the choice heifers.

We have arranged the dairy barn so as to shelter all the cows during bad weather.

## RECOMMENDATIONS.

The increased cost of provisions, and a constant increase in the number of patients, which necessarily increases the number of employes, adds to the amount of expenditures. There is also a general wear and tear of buildings and machinery, necessitating considerable expense in repairs and painting, also transportation, furniture and beds are all considered as maintenance. In view of these facts a liberal increased amount of appropriation is asked. \$160,000 is a fair estimate for maintenance for the next two years.

The colored female department is badly crowded and \$3,000.00 is asked for, to build an additional building for this department.

Our steam heating plant must be enlarged before passing through another winter. \$1,000.00 is asked for to put in another 120-horse power boiler. Our steam and electric plant should be together in order to save labor and fuel, besides the convenience. An additional large boiler would be sufficient to run both plants. In this way heat could be turned on the buildings any time at night, during sudden changes of weather. As it is our steam heating plant is shut down at night unless weather is extremely cold, then we run both plants separately. If both plants were together one fire and one fireman would be all that was necessary. A brick power house of about 30x100 feet should be built for the plant and made a permanent building, as it is we have only a shed. The cost of building this power house and moving the electric plant would be about \$4,000.00. The present electric building could be converted into a two-story Hospital building and would be very appropriate for this purpose.

One of the great needs of the Institution, and one that should receive your most earnest consideration, is an ice and cold storage plant. It is a well known fact that fresh meats, if allowed to remain in cold storage for several days before using, will be greatly improved and made more palatable. In a Hospital as large is this, where it requires so much fresh meat, an ice and cold storage plant would be an indispensable adjunct. It is not to be considered what we have spent for ice, or how cheap we can buy it. Ice at any price after paying

freight and hauling one and one-half miles up hill, is not cheap.

Besides the most important part of an ice plant is: the refrigerating or cold storage department.

Our beef is hauled 20 miles after being butchered, and in the summer time must be cooked at once, and used for one day's rations. This meat cannot be kept over until another day even when cooked. We certainly have trouble enough in getting good beef, and it should not be spoiled by cooking too soon.

I am reliably informed that an ice and cold storage plant of sufficient capacity for our Institution can be installed at a cost of not more than \$5,000.00. We have our own steam, our own distilled water, and our own labor, consequently the cost of running the plant would be very small, comparatively nothing.

A majority of the steam pipes will have to be replaced by new ones during the next two years, and a hot water pipeline should be also put in with the regular hot water heating system.

The cost of maintenance and improvements for the next two years is estimated in round numbers as follows:

For maintenance.....	\$160,000 00
For one 120-horse power boiler.....	1,000 .06
For addition to colored female department...	3,000 00
For ice plant and cold storage.....	5,000 00
For building power house and putting both plants together.....	4,000 00
For hot water system.....	2,000 00
Total.....	\$175,000 00

The increase in the cost of provisions in the last two years, and a constant increase in the number of patients, leads me to believe that an appropriation of the above amount will have to be used very economically in order to meet the requirements of the Institution.

#### HEALTH:

The health of the Hospital has been fairly good. We have had no accident or suicide or epidemics of contagious or infectious diseases. All the sickness apparently

resulted from local causes. We had considerable malarial fever, especially the fall of 1901, which was very pernicious in character. We use cistern water for drinking purposes, and water from Musquito creek for hydrant and laundry use. This creek water is more or less infected with malaria. It is impossible to keep some of the patients from drinking from the hydrants, and no doubt this is the origin of considerable malarial fever. This can be obviated only by an artesian or deep well.

If we had a deep well affording plenty of water at or near our power house, it would do away with a long line of piping, water power pump and steam plant at the dam; also time it takes to go to and from the water works. A steam plant is necessary and is kept at the water works, and has to be run occasionally when the creek is high and our turbine wheel is drowned out. I think getting our plants together would be more economical, as well as more convenient.

#### MEDICAL DEPARTMENT.

This department is being conducted in a very satisfactory manner. I believe the physician gives as much attention to our patients as though he was paid for each individual visit or prescription.

Your attention is invited to Tables Nos. 3 to 14 for a complete report of the causes of deaths, diagnoses, etc., of the patients.

More pathological work should be done, and I suggest that a microscope be purchased as a start in this direction, for examining the sputa, blood and excretions.

This would enable the physician to be more accurate in making diagnosis, and render treatment more available.

#### MANAGEMENT AND TREATMENT.

Three distinct lines of treatment should be studiously and cautiously observed in the treatment of all mental diseases. The medical, the hygenic and the moral. In nearly every case of mental disorder there are disturbed conditions of the body affecting the healthy action of the nervous system. The removal of these symptoms of disordered action must be carefully directed by the use of

such remedial agents as will most effectually change the abnormal condition.

In a great many cases a weakened state of the nervous system causing a loss of control of action as well as ideas, will be found, which requires tonic treatment, good, healthy, substantial diet with regular habits, which will serve to build up the entire system and thus remove the morbid symptoms. The constant and continued use of sedatives and narcotic should be avoided as they have a tendency to disorder the stomach, and produce a dull and confused state of the mind, as well as lessening the control of will power.

Such cases are frequently reported to Hospitals for Insane where such treatment has been carried out, and the disturbed mental symptoms soon disappear after admission to the Hospital by the withdrawal of all sedatives and narcotics and the substitution of a tonic course of medicine with a regulated diet and exercise.

Sedatives and narcotics may be needed in cases of high excitement; to calm that excitement, in a measure, and secure proper rest and sleep, but they should not be continued day after day and often several times a day, but a dose should be given at night occasionally to break up the condition of sleeplessness. Tonics, suitable diet with regular exercise and diversions, under care of attendants, selected for the purpose, should be substituted.

The hygenic treatment is a necessary adjunct of the medical and consists in the careful direction of exercise, and the application of such measures as will best assist in carrying out the other directions given as to food and exercise.

In every case of mental disorder the moral powers are, as a rule, the first to show a deranged condition, in a great many ways, dependent on the previous habits and conditions of the person.

It is a change in the individual's desire, emotion, passion and affections, from the mildest form of improper desire, unusual emotion and absence of affection, oftentimes to the individual's best friend or nearest relatives, to the condition "Full of perverseness" so as to render the individual a source of distress, annoyance, and often of positive danger to his family and the community.

Some means must be devised in every case to draw the mind out of its morbid state into a clearer and better con-

dition. The tumults of passion and emotion must be assuaged or checked by such diversions as may be best adapted to the individual at the time. The depression of melancholy must be cheered and mitigated by some occupation that will arouse the emotions from their lethargy to a more natural action. In nearly every case of mental disorder confidence in others seems to be lost, and every effort should be made to gain the confidence, and awaken faith by such a course of management, with direction of thought and action as will give assurance to the individual and gradually gain the confidence. Saying pleasant, but truthful words, doing kind acts and cheerful things, never deceiving or even appear to deceive, will greatly aid in restoring confidence, and when gained must be kept by a continuance of the same course.

The moral treatment involves every diversion, occupation and amusement which can fairly and honestly be brought to bear, to change the perverted ideas, the persistent depression, the undue exhalation of the mental disorder, and the adaptation of these to the varied tempers and dispositions requires great tact.

To properly carry forward such a course requires a degree of care, attention and management, which involves the employment of a large number of persons, so as to give to each individual, as may be required, that special thought and application which is so necessary to obtain the object desired. Such a course requires a great expense in the employment of a large number of persons and provisions to carry out these plans. But the dictate of right, justice and humanity demand that nothing shall interfere with whatever may be required to secure mental health and happiness, and to comfort those who are deprived of these great blessings. It is not for any short-sighted person or even for those who consider themselves far-sighted, to refuse such a boon to any suffering person, or to place in one scale of the balance, the health, happiness and well being of any individual and in the other scale a few thousand dollars.

I trust that the next Legislature will investigate and consider well the comfort and happiness of this class of suffering humanity and make a liberal appropriation to meet the requirement necessary to make this Hospital a modern institution.

During the biennial term the patients have been enter-

tained in the Assembly Hall by dances, musical concerts and operas.

Regular chapel services have, as usual, been conducted by Rev. W. H. Carter and Rev. J. C. Pace.

Christmas is an unusually bright and happy time for our patients, and many Christmas donations were received from different people throughout the State. We receive several newspapers regularly and quite a number of magazines from individuals who show quite an interest in the welfare of our Institution and the happiness of the patients, for which I am very grateful.

The usual routine business of the Hospital has been diligently conducted, and I desire to express my high appreciation for the corps of employes who have been industrious and faithful in the performance of their many duties.

In conclusion I wish to express to your Honorable Board my appreciation of your loyal support and co-operation in the management of the Hospital. Permit me also to express my sincere thanks for the valuable aid, kind and courteous treatment shown me by your Honorable Secretary in our business relations.

Very respectfully,

V. H. GWINN, M. D.,  
Superintendent.

TABLE NO. 20.

Dairy Receipts and Expenses for 1901.

## Receipts—

7,328 gallons sweet milk at 20 cents.....	\$1,465 60
1,815 gallons butter milk at 10 cents.....	181 50
100 gallons cream at 25 cents quart.....	100 00
2,559 pounds butter at 25 cents.....	639 75
2,969 pounds butter at 25 cents.....	178 14
172 tons fertilizer at \$1.00.....	172 00
Stock sold .....	82 80
Hides sold .....	13 50
Empty sacks sold.....	33 48
	\$2,866 47

## Expenses—

Cotton-seed meal, hulls and bran.....	\$1,339 28
95 tons ensilage at \$2.50.....	237 50
36,680 pounds millet at \$2.50 per ton.....	45 85
40 acres Velvet beans at \$2.50.....	100 00
Labor .....	525 50
Milk cans and buckets.....	23 00
Hauling (by farm).....	2 60
Cutting and hauling posts.....	31 20
	\$2,304 93
Balance in favor of dairy.....	\$ 561 54

TABLE NO. 21.

Showing Dairy Receipts and Expenditures for 1902.

## Receipts—

8,756 gallons sweet milk at 20 cents.....	\$1,751 20
1,786 gallons butter milk at 10 cents.....	178 60
100 gallons cream at \$1.00.....	100 00
3,021 pounds butter at 25 cents.....	755 25
1,057 pounds beef at .06.....	63 42
152 tons fertilizer (to farm) at \$1.00.....	152 00
Hides sold .....	12 68
	<u>\$3,013 15</u>

## Expenses—

Bran, cotton-seed meal and hulls.....	\$1,782 36
Labor .....	538 20
Hauling .....	33 10
Salt .....	73 60
Repairs for separator .....	7 35
60 acres Velvet beans at \$2.50.....	150 00
216,000 pounds Ensilage at \$2.50 per ton.....	270 00
12 tons millet at \$2.50.....	30 00
	<u>\$2,884 51</u>
Leaving a balance in favor of dairy of.....	\$ 128 64

TABLE NO. 22.

## Farm Receipts and Expenses 1901.

## Receipts—

Hauling 256 loads (other than farm).....	\$ 102 40
Hauling 2,837 cords wood at 50 cents.....	1,418 50
Cutting and hauling 321 cords wood.....	321 00
9,582 pounds pork at .06.....	574 92
169 barrels rutabagas at \$1.50.....	253 50
85 barrels collards at 60 cents.....	51 00
80 barrels turnips at \$1.50.....	120 00
64 barrels lettuce at \$2.50.....	160 00
